ALWID-BOY

semi automatic capping machine

Special characteristics

The ALWID-BOY is a semi automatic capping machine that is available as a table machine with or without a stainless steel table. The machine is suitable for processing many different cap sizes, bottle sizes and bottle shapes. Several different capping heads can be used, which can be quickly and easily changed (see "Technical Data").

The operator places a cap onto the bottle opening manually. Then he puts bottle with cap onto the lifting plate and presses the 2-hand-switch. The bottle and the cap are lifted and the automatic capping process starts. A safety switch ensures only one lifting movement. The CE-standard is guaranteed by the 2-hand-safety switch.

The machine does not need any special ground or fundament and can be placed almost everywhere.

Technical data

capacity:	dependent on operator
capping head:	3-roll- oder 4-roll-capping head, screw capping head with adjustable torque, many other alternatives possible (depends on customer 's requirement)
cap feeding:	manually, i.e. the operator places the cap on the bottle mouth
base made of:	stainless steel
electric connection:	230/400 V, 50 Hz, 3 phases + N + PE (also available in EX-version) or special
weight:	approx. 95 kg
dimensions:	485 mm x 635 mm x 1050-1500 mm (width x depth x height) (height dependent on bottle size)

Range of application

The machine is very flexible and can be used for many different capping requirements.

bottle-Ø:	as required (the centering devices are adjusted for the required diameters)
bottle height:	as required (the machine will be suitable for your requirements)
material of bottles:	containers made of the usual materials
bottle shape:	round bottles and shaped bottles
kind of caps:	several screw caps, press-in/press-on caps, PP, MCA, STELCAP and other roll-on-caps, grip cork, crown cork, twist-off and other
